[Clinical Biochemistry – selected chapters](#)

MUDr. Eva Ďurovcová, PhD., prof. Ing. Mária Mareková, CSc.

The electronic textbook of Clinical Biochemistry – selected chapters has the ambition to become a practical aid for senior medical students and beginning doctors in the study of laboratory medicine. It should make it easier for them to orientate themselves in routinely used clinical-biochemical examinations and could form a springboard for a more detailed study of laboratory methods and their use in diagnostic and monitoring algorithms. The textbook focuses on disorders of water-ion and acid-base balance disorders, and basic diagnostics of diseases of selected organs.
